Namaste Jai Ji,

Please see below mail from the doctor in Australia giving a summary of the treatment which was followed up to now.

The recommended treatment now is LuPSMA(Pluvicto).

The specialist doctor will understand what it is and a quotation or indication can be provided based on this treatment which is a Radiotherapy I think. Doctor will know how many to give, duration and procedures.

Regards

Ashok

Hi Laveena

I am still waiting on A/Prof Tran to write the referral. I will send it through as soon as possible.

Below is the list of treatments / summary:

Prostatectomy in 2017 = Gleason 5+5=10

Initially ADT, later had bilateral orchidectomy

Castration resistant 2021

1st line Abiraterone 250mg with food, (baseline PSA 3.8, PSA nadir 1.6) complicated by transaminitis (ALT/AST 300, 10xULN)

Radiotherapy to L3 in May 2022

2nd line Docetaxel (baseline PSA 4, started Aug2022, completed Jan 2023, x10 cycles, nadir 0.2)

3rd line Abiraterone/Pred (baseline PSA 6.5, started Oct 2023, PSA nadir 4 in Nov 2023)

- switch pred to dex in Feb 2023 (Baseline PSA 8, nadir <1)

4th line Cabazitaxel (baseline PSA 12, started Jan 2025, x3 cycles, PSA progression to 44)

5th line Enzalutamide and Docetaxel (baseline PSA 44, started March 2025, x3 cycles, progression to 122 in May 2025)

Last PSMA PET Jan 2025 – SUV max 20-77

Exploring LuPSMA (PLUVICTO) in Pretoria, SA and Singapore

Kind Regards
Alicia

Good morning Alicia,
Can I please request an urgent referral for my dad. As my parents have a few relatives in India at the moment who are helping to find the treatment for my dad. They all just waiting the referral and summary from Pro Ben please. Can we have it today by any chance ?

Regards,
Laveena
